Problem

Given a string, s, matching the regular expression `[A-Za-z !,?._'@]+`, split the string into tokens. We define a token to be one or more consecutive English alphabetic letters. Then, print the number of tokens, followed by each token on a new line.

Note: You may find the String.split method helpful in completing this challenge.

```java
import java.io.*;
import java.util.*;

public class Solution {

    public static void main(String[] args) {
        Scanner scan = new Scanner(System.in);
        String s = scan.nextLine();
        // Write your code here.
        scan.close();
        String regex = "[ !,?._'@]+";
        String[] tokens = s.split(regex);
        if (tokens.length == 0) {
            System.out.println(tokens.length);
        } else {
            System.out.println((tokens[0].compa
```

Submissions

Input Format

A single string, s.

Constraints

- $1 \leq$ length of $s \leq 4 \cdot 10^5$
- s is composed of any of the following: English alphabetic letters, blank spaces, exclamation points (`!`), commas (`,`), question marks (`?`), periods (`.`), underscores (`_`), apostrophes (`'`), and at symbols (`@`).

Leaderboard

Output Format

On the first line, print an integer, n, denoting the number of tokens in string s (they do not need to be unique). Next, print each of the n tokens on a new line in the same order as they appear in input string s.

Sample Input

```
He is a very very good boy, isn't he?
```

Discussions

Sample Output

```
10
He
is
a
very
very
good
boy
isn
t
he
```

Editorial

Explanation

We consider a token to be a contiguous segment of alphabetic characters. There are a total of 10 such tokens in string s, and each token is printed in the same order in which it appears in string s.
