

and for manipulating the calendar fields, such as getting the date of the next week.

Problem

You are given a date. You just need to write the method, ***getDay***, which returns the day on that date. To simplify your task, we have provided a portion of the code in the editor.

Example

month = 8

day = 14

year = 2017

The method should return ***MONDAY*** as the day on that date.

Language

Java 7

```
1  import java.io.*; ...
8
9  class Result {
10
11     /*
12      * Complete the 'findDay' function below.
13      *
14      * The function is expected to return a STR
15      * The function accepts following parameter
16      * 1. INTEGER month
17      * 2. INTEGER day
18      * 3. INTEGER year
19      */
20
21     public static String findDay(int month, int
        year) {
```
