

Problem

You are updating the username policy on your company's internal networking platform. According to the policy, a username is considered valid if all the following constraints are satisfied:

- The username consists of **8** to **30** characters inclusive. If the username consists of less than **8** or greater than **30** characters, then it is an invalid username.
- The username can only contain alphanumeric characters and underscores (`_`). Alphanumeric characters describe the character set consisting of lowercase characters [`a - z`], uppercase characters [`A - Z`], and digits [`0 - 9`].
- The first character of the username must be an alphabetic character, i.e., either lowercase character [`a - z`] or uppercase character [`A - Z`].

Submissions

For example:

Leaderboard

Username	Validity
Julia	INVALID; Username length < 8 characters
Samantha	VALID
Samantha_21	VALID
1Samantha	INVALID; Username begins with non-alphabetic character
Samantha?10_2A	INVALID; '?' character not allowed

Discussions

Update the value of `regularExpression` field in the `UsernameValidator` class so that the regular expression only matches with valid usernames.

Input Format

Editorial

The first line of input contains an integer ***n***, describing the total number of usernames. Each of the next ***n*** lines contains a string describing the username. The locked stub code reads the inputs and validates the username.

Constraints

- $1 \leq n \leq 100$
- The username consists of any printable characters.

Output Format

For each of the usernames, the locked stub code prints `Valid` if the username is valid; otherwise `Invalid` each on a new line.

Sample Input 0

```
8
Julia
Samantha
Samantha_21
1Samantha
Samantha?10_2A
JuliaZ007
1234567890
```

[Change Theme](#)

Language

Java 7

```
1 import java.util.Scanner;
2 class UsernameValidator {
3     /*
4      * Write regular expression here.
5      */
6     public static final String regularExpressio
7 }
8
9 ...
```

Line: 2 Col: 1
