

Change Theme Language Java 15

Problem

will be d space-separated integers. In the next line there will be an integer q denoting number of queries. Each query will consist of two integers x and y .

Constraints

- $1 \leq n \leq 20000$
- $0 \leq d \leq 50000$
- $1 \leq q \leq 1000$
- $1 \leq x \leq n$

Each number will fit in signed integer.

Total number of integers in n lines will not cross 10^5 .

Output Format

In each line, output the number located in y^{th} position of x^{th} line. If there is no such position, just print "ERROR!"

Sample Input

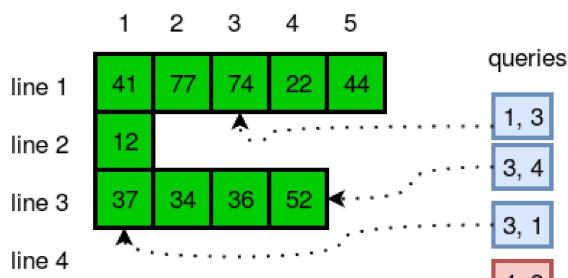

```
5
5 41 77 74 22 44
1 12
4 37 34 36 52
0
3 20 22 33
5
1 3
3 4
3 1
4 3
5 5
```

Sample Output

```
74
52
37
ERROR!
ERROR!
```

Explanation

The diagram below explains the queries:

```
1 import java.io.*;
2 import java.util.*;
3
4 public class Solution {
5
6     public static void main(String[] args) {
7         /* Enter your code here. Read input from
8         Print output to STDOUT. Your class should
9         Solution. */
10        Scanner sc = new Scanner(System.in);
11        int numofLines = sc.nextInt();
12        ArrayList<Integer> list = new ArrayList<Integer>();
13        for (int i = 0; i < numofLines; i++) {
14            int n = sc.nextInt();
15            ArrayList<Integer> numList = new ArrayList<Integer>();
16            for (int j = 0; j < n; j++) {
17                numList.add(sc.nextInt());
18            }
19            list.add(numList);
20        }
21        int numofQueries = sc.nextInt();
22        for (int i = 0; i < numofQueries; i++) {
23            int x = sc.nextInt();
24            int y = sc.nextInt();
25            if (x > 0 && x <= list.size() && y > 0 && y <= list.get(x-1).size()) {
26                System.out.println(list.get(x-1).get(y-1));
27            } else {
28                System.out.println("ERROR!");
29            }
30        }
31    }
32}
```
