

## Problem

You are given a **6 \* 6** 2D array. An hourglass in an array is a portion shaped like this:

```
a b c
  d
e f g
```

## Submissions

For example, if we create an hourglass using the number 1 within an array full of zeros, it may look like this:

```
1 1 1 0 0 0
0 1 0 0 0 0
1 1 1 0 0 0
0 0 0 0 0 0
0 0 0 0 0 0
0 0 0 0 0 0
```

## Leaderboard

Actually, there are many hourglasses in the array above. The three leftmost hourglasses are the following:

```
1 1 1    1 1 0    1 0 0
  1        0        0
1 1 1    1 1 0    1 0 0
```

## Discussions

The sum of an hourglass is the sum of all the numbers within it. The sum for the hourglasses above are 7, 4, and 2, respectively.

In this problem you have to print the largest sum among all the hourglasses in the array.

## Input Format

There will be exactly **6** lines, each containing **6** integers separated by spaces. Each integer will be between **-9** and **9** inclusive.

## Editorial

## Output Format

Print the answer to this problem on a single line.

## Sample Input

```
1 1 1 0 0 0
0 1 0 0 0 0
1 1 1 0 0 0
0 0 2 4 4 0
0 0 0 2 0 0
0 0 1 2 4 0
```

## Sample Output

19

## Explanation

The hourglass which has the largest sum is:
